DUNGEON CRAWLER

by Windward Audio · version 1.0.0 · Read Me

What it is

DUNGEON CRAWLER is a dark-fantasy instrument: a software instrument you play from a MIDI keyboard or the piano roll. A painted map of a dark realm is its interface, and every place on it has its own instrument, played inside that place's space and effects: a lute in the castle courtyard, church bells in the bell tower, a ghost violin in the graveyard.

DUNGEON CRAWLER FX is the same ten locations and forty places as an audio effect: whatever runs through it (a guitar, a synth, a piano, a voice) sounds as if it were played there.

Both are installed by **DUNGEON CRAWLER.pkg** as Audio Unit and VST3 plug-ins, with their sounds and factory presets.

Requirements

- macOS 10.15 (Catalina) or later
- A Mac with Apple Silicon or an Intel processor
- A music app that loads Audio Unit or VST3 plug-ins (GarageBand, Logic Pro and others)

Install

1. Quit GarageBand, Logic Pro and any other music apps.
2. Double-click **DUNGEON CRAWLER.pkg** and follow the steps. macOS asks for your password.
3. Open your music app. Both plug-ins are listed under **Windward Audio**.

Installing again (for example a later 1.0 update) replaces the plug-ins and keeps your presets.

Finding it in your music app

GarageBand

- DUNGEON CRAWLER: create a Software Instrument track, open Smart Controls (B) > Plug-ins > the Instrument slot > AU Instruments > Windward Audio > DUNGEON CRAWLER.
- DUNGEON CRAWLER FX: on any track, Smart Controls (B) > Plug-ins > an empty slot > Audio Units > Windward Audio > DUNGEON CRAWLER FX.
- If you see sliders instead of the painted map, switch the plug-in window's view menu from “Controls” to “Editor”.

Logic Pro

- DUNGEON CRAWLER: the Instrument slot of a Software Instrument track > AU Instruments > Windward Audio > DUNGEON CRAWLER.
- DUNGEON CRAWLER FX: any Audio FX slot > Audio Units > Windward Audio > DUNGEON CRAWLER FX.
- If either is missing, open Logic Pro > Settings > Plug-in Manager, select it under Windward Audio and click “Reset & Rescan Selection”.

Other music apps

- Rescan plug-ins if your app asks, then look for Windward Audio (or DUNGEON CRAWLER / DUNGEON CRAWLER FX) in its instrument or effect list, as Audio Unit or VST3.

Projects you made with an earlier version of DUNGEON CRAWLER open with the same sound and settings.

Presets

The factory presets are built into the plug-ins (the Presets menu at the top of the window). Presets you save are kept in:

```
~/Library/Windward Audio/DUNGEON CRAWLER/Presets
~/Library/Windward Audio/DUNGEON CRAWLER FX/Presets
```

Presets your music app saves for the plug-ins are kept in:

```
~/Library/Audio/Presets/Windward Audio/DUNGEON CRAWLER
~/Library/Audio/Presets/Windward Audio/DUNGEON CRAWLER FX
```

The first time you open version 1.0, presets you saved with an earlier version are copied here automatically; the originals are left where they were. (~ is your home folder. In Finder choose Go > Go to Folder and paste the path.)

Uninstall

Quit your music apps, then move these to the Trash (Finder asks for your password):

```
/Library/Audio/Plug-Ins/Components/DungeonCrawler.component
/Library/Audio/Plug-Ins/Components/DungeonCrawlerFX.component
/Library/Audio/Plug-Ins/VST3/DungeonCrawler.vst3
/Library/Audio/Plug-Ins/VST3/DungeonCrawlerFX.vst3
```

To remove your saved presets as well, also move these to the Trash:

```
~/Library/Windward Audio/DUNGEON CRAWLER
~/Library/Windward Audio/DUNGEON CRAWLER FX
~/Library/Audio/Presets/Windward Audio/DUNGEON CRAWLER
~/Library/Audio/Presets/Windward Audio/DUNGEON CRAWLER FX
```

Then restart your Mac (or log out and back in) so music apps forget the plug-ins.

Support

Questions or problems? Write to **support@windwardaudio.com**. Please include your macOS version, your music app and what happened.
